Technical Graduate @ Nationwide with experience building modern web applications and internal developer tooling using TypeScript, Deno and React. First Class Computer Science graduate passionate about building high-quality software, embracing generative AI to improve engineering productivity, and continuously learning, questioning things and refining the way I work.

Education

Newcastle University <i>BSc Computer Science (Software Engineering)</i> First Class Honours	2022-25
St John's Sixth Form, Bishop Auckland <i>A Levels</i> Computer Science (A), History (B), BTEC Sport (Distinction *), Co-founded "IT and Coding Club"	2020-22

Technical Skills

Languages: TypeScript, JavaScript, Python, HTML, CSS

Frameworks: React, NextJs, Tailwind CSS, Deno

Developer Tools: Git, GitHub, GitHub Actions, Jenkins, Jira, Confluence, Figma

Testing & Deployment: Vitest, CI/CD, Vercel, Deno Deploy, Jenkins, REST APIs

AI: Tmux & Herdr for CLI Agentic Development, Agent Skills, MCPs, oLlama, Claude, Codex

Experience

Technical Graduate @ Virgin Money / Nationwide - Develop features using TypeScript, in a Deno web application used to analyse and report on codebases. - Became proficient using Github Copilot making use of skills, mcp servers and agentic workflows to be more productive. Including creating and refining skills to perform upgrades and perform audits on repositories - Built an internal dashboard displaying repository health metrics, helping engineering teams identify areas for improvement and prioritise technical work. - Contributed to terminal (TUI) and CLI tooling that streamlined repository maintenance workflow and some general developer tasks. - Worked on legacy UI components in an internal react component library. - Delivered tooling inductions for colleagues, supporting adoption across engineering teams. - Worked within an Agile squad and gained exposure to CI/CD and Jenkins pipelines	Sept '25 - Present
Freelance @ Crook Community Centre - https://cc-centre.org - Gathered requirements directly from the client and translated them into wireframes and interactive Figma prototypes. - Developed and maintain a responsive Next.js and Tailwind CSS website deployed on Vercel. - Integrated the Resend API to enable reliable contact form submissions. - Implemented automated quality checks using Vitest, GitHub Actions and Vercel deployment checks to ensure safe production deployments. - Implemented a Git-backed Keystatic CMS, enabling authorised centre staff to create, edit and publish upcoming events without modifying application code.	Sept '24 - Present
Back Of House @ Nandos - Balanced employment alongside full-time university studies while achieving a First Class Computer Science degree. - Worked collaboratively in a fast-paced kitchen environment, coordinating with colleagues to deliver consistently high standards. Also helped out floor staff when needed, requiring customer service skills - Trained and supported new team members during onboarding.	July '23 - Sept '25
Shift Leader & Customer Service Assistant @ One Stop - Started on tills in customer service, got promoted to shift leader after 8 months. - Developed strong teamwork and communication skills in fast-paced customer-facing environments. - Took on leadership responsibilities including opening and closing the store, supervising colleagues and resolving customer issues.	March '21 - Jan '23

Projects & Certificates

HoliTrackr / MyAtlas

Current

Built a full-stack travel tracker because I wanted a better way to record where I had been. It uses React, TypeScript, Leaflet and PostgreSQL, with Google OAuth and separate maps and travel journals for each user so friends and family can track their own trips. The interface updates immediately as countries are added and resynchronises with the database if a request fails. Deployed the backend through Vercel Functions and created a cached, read-only statistics endpoint that safely supplies live travel data to my portfolio.

Personal Portfolio & Data Platform

Current

Designed and built a Next.js portfolio that showcases both my development work and personal interests using live data from GitHub, Strava and my own travel tracker. Developed a separate Cloudflare Worker to refresh and aggregate Strava activity through scheduled jobs, caching the results in Workers KV to avoid relying on the rate-limited API during page loads. Integrated a privacy-limited HoliTrackr endpoint to display where I have been alongside coding and running travel.

AI Coder: From Vibe Coder to Agentic Engineer (Udemy)

July '26

Completed a course covering AI-assisted software development, agentic engineering workflows, Model Context Protocol (MCP) and modern developer tooling using GitHub Copilot, Claude Code, Codex, Sprites, Tmux, OpenCode

University Dissertation Project - "Relieve pressure on teachers by generating lesson plans"

Feb - May '25

Built an AI lesson-planning application for my final-year dissertation. I surveyed teachers to understand how they actually plan lessons, then researched prompt-engineering techniques to identify what an LLM needs to produce something genuinely useful. The final Next.js application used the OpenAI API, Prisma and PostgreSQL, allowing teachers to generate, edit, search, save and download personalised lesson plans. Google OAuth through NextAuth securely associated every plan with its creator.

University Group Software Engineering Project

April - May '24

Worked in a group to design and build an application around one of the UN's climate goals. We took it through the full development cycle: researching the problem, proposing ideas for approval, designing and building the application, testing it and presenting the result. We used Python, Flask and PostgreSQL, and it was my first experience working with Docker and GitHub Actions as part of a team project.

Other Skills & Interests

- Attend Achilles Heel Run Club every Wednesday
- Passionate about travel, socialising, and staying active through sports and fitness.
- Played American Football for the University - pushed me out of my comfort zone to learn a brand new sport
- Enthusiastic learner, consistently exploring new information across various topics, primarily through reading, podcasts, and YouTube videos.
 - Favourite Tech Podcast: Syntax Podcast, Non Tech: Rest is History
